

Andrew Pratt – Software Engineer

mrandypratt@gmail.com | (731) 614-1581 | Nashville, TN USA

Summary

Full-stack, AI-Enabled engineer focused on Backend and Cloud Infrastructure while rebuilding a primary-care EHR in production. Strongest in platform consolidation, owning end-to-end processes, and building AI-agent workflows.

Technical Skills

- Languages & Frameworks: TypeScript, React, NestJS, TypeORM, Node.js, GraphQL
 - Data: PostgreSQL, MS SQL Server, Dynamo DB, Medplum FHIR
 - Cloud: AWS CDK, Lambda, Step Functions, ECW, SQS, SNS, EventBridge, RDS, S3, Cognito, IAM, X-Ray
 - Agentic AI: Claude Code (skills, subagents, hooks), context & harness engineering, multi-agent workflows
-

Experience

Software Engineer — Ensomata

March 2023 - Present

Member of 8 engineer team replacing a legacy EHR vendor in production across 24 facilities and over 200 active users. Largest single contributor to monorepo by commits (19%) with over 2,100 total commits and 630 PRs merged.

- Clinical Decision Support: Team Subject-Matter Expert owning rule-creation and recommendation-evaluation service end-to-end serving ~2,100 recommendations daily across all facilities.
 - Platform & Backend: Established ECS API to integrate with Legacy EHR MS SQL Server and substantial contributor to bi-directional sync architecture between Legacy system and our own Postgres DB and ECS API.
 - Migrations & Decommissioning: Removed 1.39M lines vs adding 1.12M over 3 years resulting in net removal of code with zero downtime while shipping features. Notable accomplishments: retiring production GraphQL/AppSync API with 120+ operations and consolidating rules-engine microservice into monorepo saving hundreds of dollars per month of AWS bills and increasing developer velocity.
 - Cloud Infrastructure: Single-handedly shipped greenfield ETL platform from scratch in isolated AWS Account with AD Authentication, DNS, ECS with queue orchestration, RDS Postgres, developer tooling, and Azure integration all in CDK infrastructure as code.
 - AI-Enabled Engineering: Instrumented monorepo with Claude Code context & harness engineering improving throughput for AI adopters by 26%. Created another self-learning AI knowledge-graph harness for inspecting, recording, and verifying the behaviors of the legacy EHR.
-

Personal Projects

- **GameSetBook** (gamesetbook.com): public tennis court booking platform (2023-2024)
 - **CardsWithFriends** (cardswithfriendsgame.com): Real-time multi-player online party game (2021-2022)
-
